**PATIENT INTAKE FORMS**

- Patient's today feel more comfortable completing forms online.
- Reduces the need to write the same information multiple times.
- Provides the the doctor and team time to prepare for an appointment.
- Provides the billing and insurance team adequate time to verify insurance.
- Eliminates wasted time and money by having forms uploaded directly to EHR.

**ONLINE SCHEDULING**

- Scheduling appointments over the phone requires an office to be open. Online scheduling can be done 24 hours a day.
- Most patients prefer to schedule online.
- Many online scheduling systems allow you to set up automated reminders for upcoming appointments and annual visits, and they have shown a 50% decrease in no-shows.
- Eliminates time and resources spent on scheduling appointments, making calls to remind patients about appointments, and rescheduling.

**WAITING ROOMS**

- Provide a comfortable waiting area for your patients.
- Provide WIFI in the waiting area so patients can check emails or log into social networks.
- Create a policy for no-shows and late arrivals and stick to it.
- Schedule adequately for new patient visits, reactivation visits, and routine office visits.
- If there are delays, notify your patients immediately.
- Your goal is to have patients in your waiting area for less than 5 minutes.

## What keeps patients engaged?

**60.66%** **Mobile Traffic vs. Desktop Traffic**  
currently comes from mobile phones. Desktop devices, on the other hand, generate about 37%, while tablets are responsible for the lowest bit—2.22%.

**72.6%** **Web Visits**  
Almost three-quarters of internet users will access the web solely via their smartphones by 2025, equivalent to nearly 3.7 billion people.

**92.5%** **Mobile Apps**  
is reserved for mobile apps. Interestingly, the daily use of smartphones boasts a 6.7% year-on-year increase.

**64%** **Smartphone Conversion Rates**  
A key aspect regarding mobile vs. desktop search is that when a person uses a smartphone to make a query, they generally have a particular end goal in mind. Average smartphone conversion rates are up 64% compared to desktop conversion rates.

---

9

**chiroAI** >>>

## Patient Education

Research has consistently found that patients often forget information given to them by their physicians.

Patients can immediately forget 40% to 80% of the medical information and recommendations they receive. Only about half of the information they remember is typically recalled correctly.

For any recommendation to be effective, patients must remember what it is and how to achieve it.

---

---

---

---

---

---

---

**chiroAI** >>>

## Benefits of Patient Education

- 01 Provide Context**  
Effective communication about what an adjustment does and doesn't do is key. Patients think your cervical adjustments treat their headaches, and your lumbar adjustments treat their low back pain.
- 02 Set Appropriate Expectations**  
Most patients begin chiropractic care with a set of expectations you can't possibly compete with. They expect instant results, you do most of the work, etc.
- 03 Build Trust and Create Ease.**  
Effective patient education is an investment in building trust and creating a deep connection with each patient. Ultimately, this is about setting and respecting clear boundaries. Communicating this at the beginning of each new relationship is essential.

## Appontment Scheduling

Front desk staff spends an average of 33 hours per week scheduling appointments.

From the patient's perspective, reaching someone to schedule an appointment requires up to 8 minutes, with 30 percent of the time on hold. For the Millennial generation, this can be a deal-breaker.

Millennials (ages 18-34 in 2016) have always had access to online information. They dislike traditional methods of healthcare; 71 percent prefer to schedule online and to receive digital reminders rather than by phone contact. They can be a challenging group to engage and retain without offering the convenience of online appointment booking.

- 56.4 percent of respondents are frustrated with waiting on hold and the inconvenient office hours related to scheduling appointments by phone.
- 31 percent of respondents would be more likely to choose a new service provider if that provider offered online booking options.
- 60 percent of respondents said that getting a text reminder would make them less likely to miss an appointment compared to phone call or email reminders.

Respondents would prefer to schedule doctor's appointments online more than any other type of appointment.

51% of patients prefer doctors that let them fill out paperwork online!!

## Intake Paperwork

Paperwork is the necessary evil of every office.

Patients feel frustrated writing the same information on multiple forms.

For doctors and staff, paperwork creates delays.

---

**chiroAI** >>>

## Office Efficiency

Forms completed online and submitted electronically allow the clinic team to:

- Obtain insurance verification in advance of the appointment
- Have forms uploaded directly to the EHR so doctors can review prior to the patient visit
- Clinic staff is not left to decipher patient scribbles and reduces errors to the medical records

Additionally, 61% of claim denials result from demographic or technical errors like inaccurate social security numbers, address, etc.

## Patient Satisfaction

Forms completed online and submitted electronically improve patient satisfaction by:

- Reduces patient frustration by entering information like name, address, etc. time
- Reduces the wait time before seeing the provider
- Eliminates confusion when it comes to discussing insurance and payment options.

## Patient Communication

**Improve Office Productivity**  
Healthcare organizations can often become overwhelmed with the many important tasks that must be completed and may not have time to remind patients of upcoming appointments or update the list if someone cancels. Automated appointment reminders ensure patients receive these valuable reminders and minimize the risk of your staff juggling too many tasks simultaneously. They also increase your staff's ability to focus better on providing excellent patient care while cutting costs and increasing the bottom line. With an automated appointment reminder solution, healthcare organizations can be confident that patients receive the best quality of care.

**Increase Patient Satisfaction**  
Using an appointment reminder solution can enhance patient experiences. With it, your office can seamlessly connect with patients and customize what message you want to deploy and when. With such busy schedules and lives, appointment reminders allow patients to confirm, change, or cancel appointments with the flexibility they may seek. Reminders allow patients to respond when it is most convenient for them, rather than answering a phone call, which can come at an inopportune moment.
